Patient Name: Tammy Lawson
 Patient No.:
 LMP: 18 wks ago
 GA by LMP: 18w 4d
 GA by First Study:
 GA by Today's US: 20w 1d
 History/Indications: Anatomy

Study Date:
 Referring MD: Carol List, CNM
 Sonographer: Leslie Miller, RDMS
 DOB, Age: 22
 Pregnancies:
 GA Selected: 20w1d (Sonographic)
 EDD: 19w6d from now

CLINICAL SUMMARY

Type of Gestation: Singleton
 Intrauterine pregnancy in vertex presentation.
 Fetal size is appropriate for gestational age by weight.

Fetal growth:

Consistent with normal fetal growth

Fetal motion and organs seen:

- A fetal bladder was observed
- A fetal stomach was observed
- A four chamber cardiac view was observed

Fetal abnormalities observed:

- Fetal gender: Male
- Placental location: Anterior.
- Placental maturity was Grade II.
- There is no evidence of placenta previa.
- Amniotic fluid volume is normal.
- The nuchal translucency was greater than 2.5 mm.
- There was not funnelling of the internal os.
- Uterus and adnexae: No abnormalities seen
